

Project Report  
CS 300  
Winter 2022

The project report should consist of two parts: The project retrospective and the presentation slides.

The project retrospective is a discussion of how the project went over the course of the term. You should bring up what went well and what did not go well. On the “did not go well” items, you should come up with 1 or 2 suggestions on how to improve those items. You should also discuss what lessons were learned during the project and what you would and would not do the same in the next project.

The retrospective should be 2 or 3 pages in length.

The presentation slides should be 3 or 4 slides that you would use if you were presenting the finished project to stakeholders. You should talk about the completed functionality, how the system was tested and any known defects or issues.
